Why Touch?

- Touch technology provides a fast and intuitive interface for users.
- Computer literacy is no longer an issue – as interaction with your content is natural through touch gestures.
- No keyboard and mouse ensures a neat and efficient environment.
- Create a bright, colourful touch experience that engages and unites audiences in a classroom and beyond.
- Multi-Touch technology facilitates collaboration – greatly increasing productivity and profitability.
- Touch is no longer a new concept (i.e. tablets and smart phones) – as such children and adults alike will naturally adopt these larger formats.
- Interacting directly with your material ensures the focus of your audience is not divided - like it would be using a laser, clicker or tablet.

Natural

Engaged

Collaboration

Touch LED

- Easy to use with any windows laptop or computer through plug and play.
- Gives full touch access to any program or app installed on your windows machine.
- Facilitates hand writing recognition that automatically converts hand writing to text.
- Navigate through documents, videos, presentations or websites using gestures.
- Share your documents, graphs and multi-media with anyone anytime.
- Facilitates annotating over any application.

Hand Writing Recognition

Touch Interaction

- Touch gestures is more natural to humans than moving and clicking the mouse or clicker.
- Reviewing / brainstorming or collaborating on Windows and pdf documents has never been easier.
- Annotating on Excel during presentations or meetings greatly enhances productivity and the experience.
- Using annotations turns PowerPoint presentations from a one-way communication channel to a proper collaborative two-way channel (allowing people to add their ideas and enhancing the presenter with a tool to encourage participation from audience).
- Not restricted to any specific software installed on your machine.

Elevates the use of the below popular software suites and many more

Word

Excel

Powerpoint

Skype for Business

Zoom

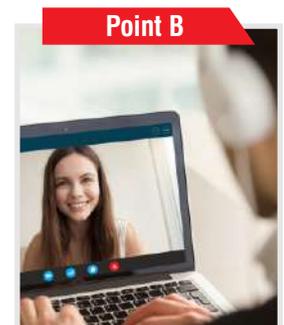

Teams

Microsoft Teams / Zoom with the Touch LED Panel

The Touch LED panel increases the effectiveness of the following features on Microsoft Teams / Zoom

- Choose how to communicate through text chat, voice or video conference call.
- Microsoft Teams / Zoom can be used on PCs, tablets and smartphones.
- See if your contacts are available, in a meeting or away from their desk.
- Send and share files with simple drag and drop.
- Start an impromptu video conference with the touch of a button.
- Schedule online meetings for up to 250 participants using Outlook.
- Share PowerPoint presentations or your entire desktop during an online meeting.
- Leverage the built in Digital Whiteboard to brainstorm and increase productivity over virtual meetings.

Touch LED Panels is not restricted to any one industry

Small to large office | Small to large boardroom | Small to large training room | Brainstorming room

Engage with users and customers by allowing them to interact with photos, videos, documents, webpages, global maps and all kinds of different applications.

Experience a whole new level of possibilities when designing and creating architecture projects. Facilitate virtual tours and deeper level of interaction with a greater level of detail.

Present meetings on the Touch panel in your boardroom & schools. Make use of the Microsoft office products to organise and manage your meetings.

Explore live webinar meetings over the web to present, discuss or demonstrate. Participants can view documents and applications via their computers, while shared audio allows for presentation and discussion.

We have dedicated support staff to assist with issues as well as installations.
